Specialised Fire Protection

Robertson Coatings specialise in applying state of the art passive fire protection coatings to retard or suppress fire and the effects of fire.

KBS Coating is a water based ablative fire protective cable coating that is tough, flexible and weather resistant.

KBS Coating prevents flame-spread along vertical or horizontal cables and prolongs circuit integrity without affecting the current carrying capacity. KBS Coating has been successfully tested to different standards such as DIN 4102, IEC 332-3, BS 476, FM 3971 and ASTM 2863.

KBS Panel Seal is a single and double panel penetration seal for through penetration fire stops, and provides a smoke gas tight and fire-resistant seal around penetration utilities such as cables, cable trays, pipes and ducts. KBS Panel Seal have been tested to international standards and carry ratings of up to 240 minutes.

KBS Mortar is a penetration seal for through-penetration fire stops that provides a non-shrinking, homogenous and smoke gas tight fire seal for cables and utility penetrations in walls and floors. KBS Mortar has been tested to international standards and carries ratings from 60 to 240 minutes.

KBS Seal bags are expanding pillows for through-penetration fire stops.

These are unique fire pillows that are deal penetration seals where changes such as retrofitting of cables or metal pipes are the rule rather than the exception. KBS Seal bags have been tested to international standards and have ratings of up to 240 minutes.

All products and systems have been tested to an equivalent or more severe: UL 1479, FM Global 3971, AS 4072.1.
