## Robertson Coatings Protecting Rio Tinto cabling with KBS Coating – Cape Lambert

Robertson Coatings has just completed supplying and installing FM Rated KBS Coating to Rio Tinto’s Cape Lambert iron ore operation, located in Cape Lambert, Western Australia. Works were completed for Southern Cross Electrical Engineering – WA.

The application of KBS Coating was completed on site by Robertson Coatings, a licensed KBS Applicator. Robertson Coatings can be contacted on 1300 262 846 or 0438 541 908.

KBS Coating was installed according to FM Global Standard 3971.

All applications of KBS material were assessed upon practical completion by Robertson Coatings to ensure the correct application and procedures had taken place.

KBS Coating is ideal for both external and internal that contain fuel oils and it has been tested to over 100 types of oils and chemicals and is totally weather resistant.

KBS Coating can also Fire Rate existing cables for up to 60 minutes, under IEC 60331-11. KBS Coating can be applied by hand, brush or spray.

KBS Coating was installed on cabling under Substation 6, part of the current expansion to Rio Tinto’s Cape Lambert Iron ore loading facility. The Pilbara 330 expansion centres on increasing the Rio Tinto’s port at Cape Lambert from current annual capacity of 80 million tonnes, to 180 million tonnes by 2016. This will be achieved through construction of a new 1.8 km jetty and four berth wharf to run parallel to the existing jetty and four berth wharf.

We would like thank both Rio Tinto and Southern Cross Electrical Engineering WA for their support and look forward to helping them with their passive fire requirements in the future.
